Product Description

PRODUCT DETAIL

Due to the excellent weather resistance of the galvanized layer, the service life is very long and does not require any maintenance costs. Compared with processes such as painting, painting, etc., maintenance is required.

It has good hardness and mechanical properties, and can withstand mechanical damage during handling, hoisting, etc.

Due to the chemical activity of zinc is stronger than that of steel, even if there are small defects on the surface of the zinc coating, it can protect the steel substrate exposed on the surface after the zinc coating is missing

The hot-dip galvanizing process does not affect the mechanical properties of the original workpiece structural design
